System TM

If you're curious about how our innovative solutions for mass timber production come about, then this is your chance to get a look behind the scenes.

We are pleased to invite you to our open house event this June. Come join us for a guided tour through our production halls, where you'll get an exclusive look at one of our newest projects – a massive CLT facility.

Our open house will take place at Kallesoe Machinery from June 13 – 17, 2022.

The event will be held in collaboration with our sister company System TM, and you will be able to visit their company as well. The event is a perfect opportunity for you to discover the latest news and developments within Mass Timber and Timber Processing.

At Kallesoe you will find state-of-the-art production lines for Mass Timber

You'll gain insight into our production processes, and how we progress from design, construction, assembly, and testing to ship-off.

We'll take you on a guided tour of our production facilities, where we'll show a wide variety of the newest state-of-the-art production lines for mass timber.

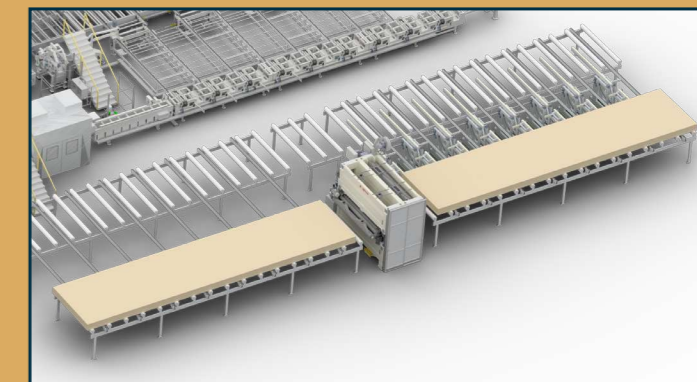

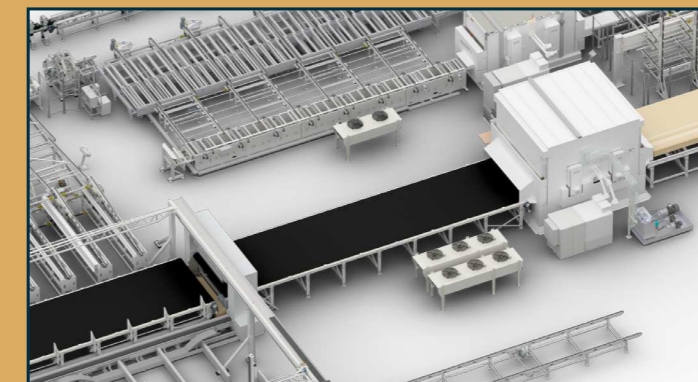

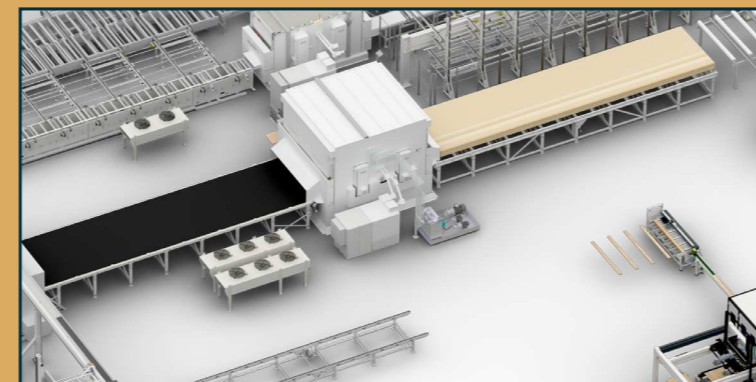

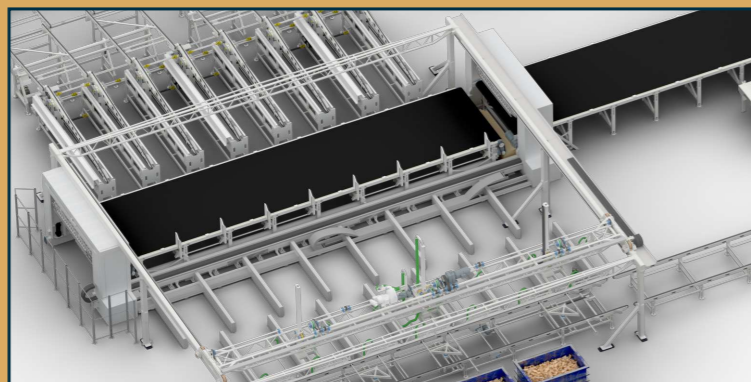

The tour will include a look into some of the most essential parts of a massive CLT production plant that we are currently working on for our customer in Austria.

You'll be surrounded by experts in highly advanced machinery, so there'll be plenty of opportunity for asking questions and to gain the latest knowledge from our industry.

We look forward to seeing you!

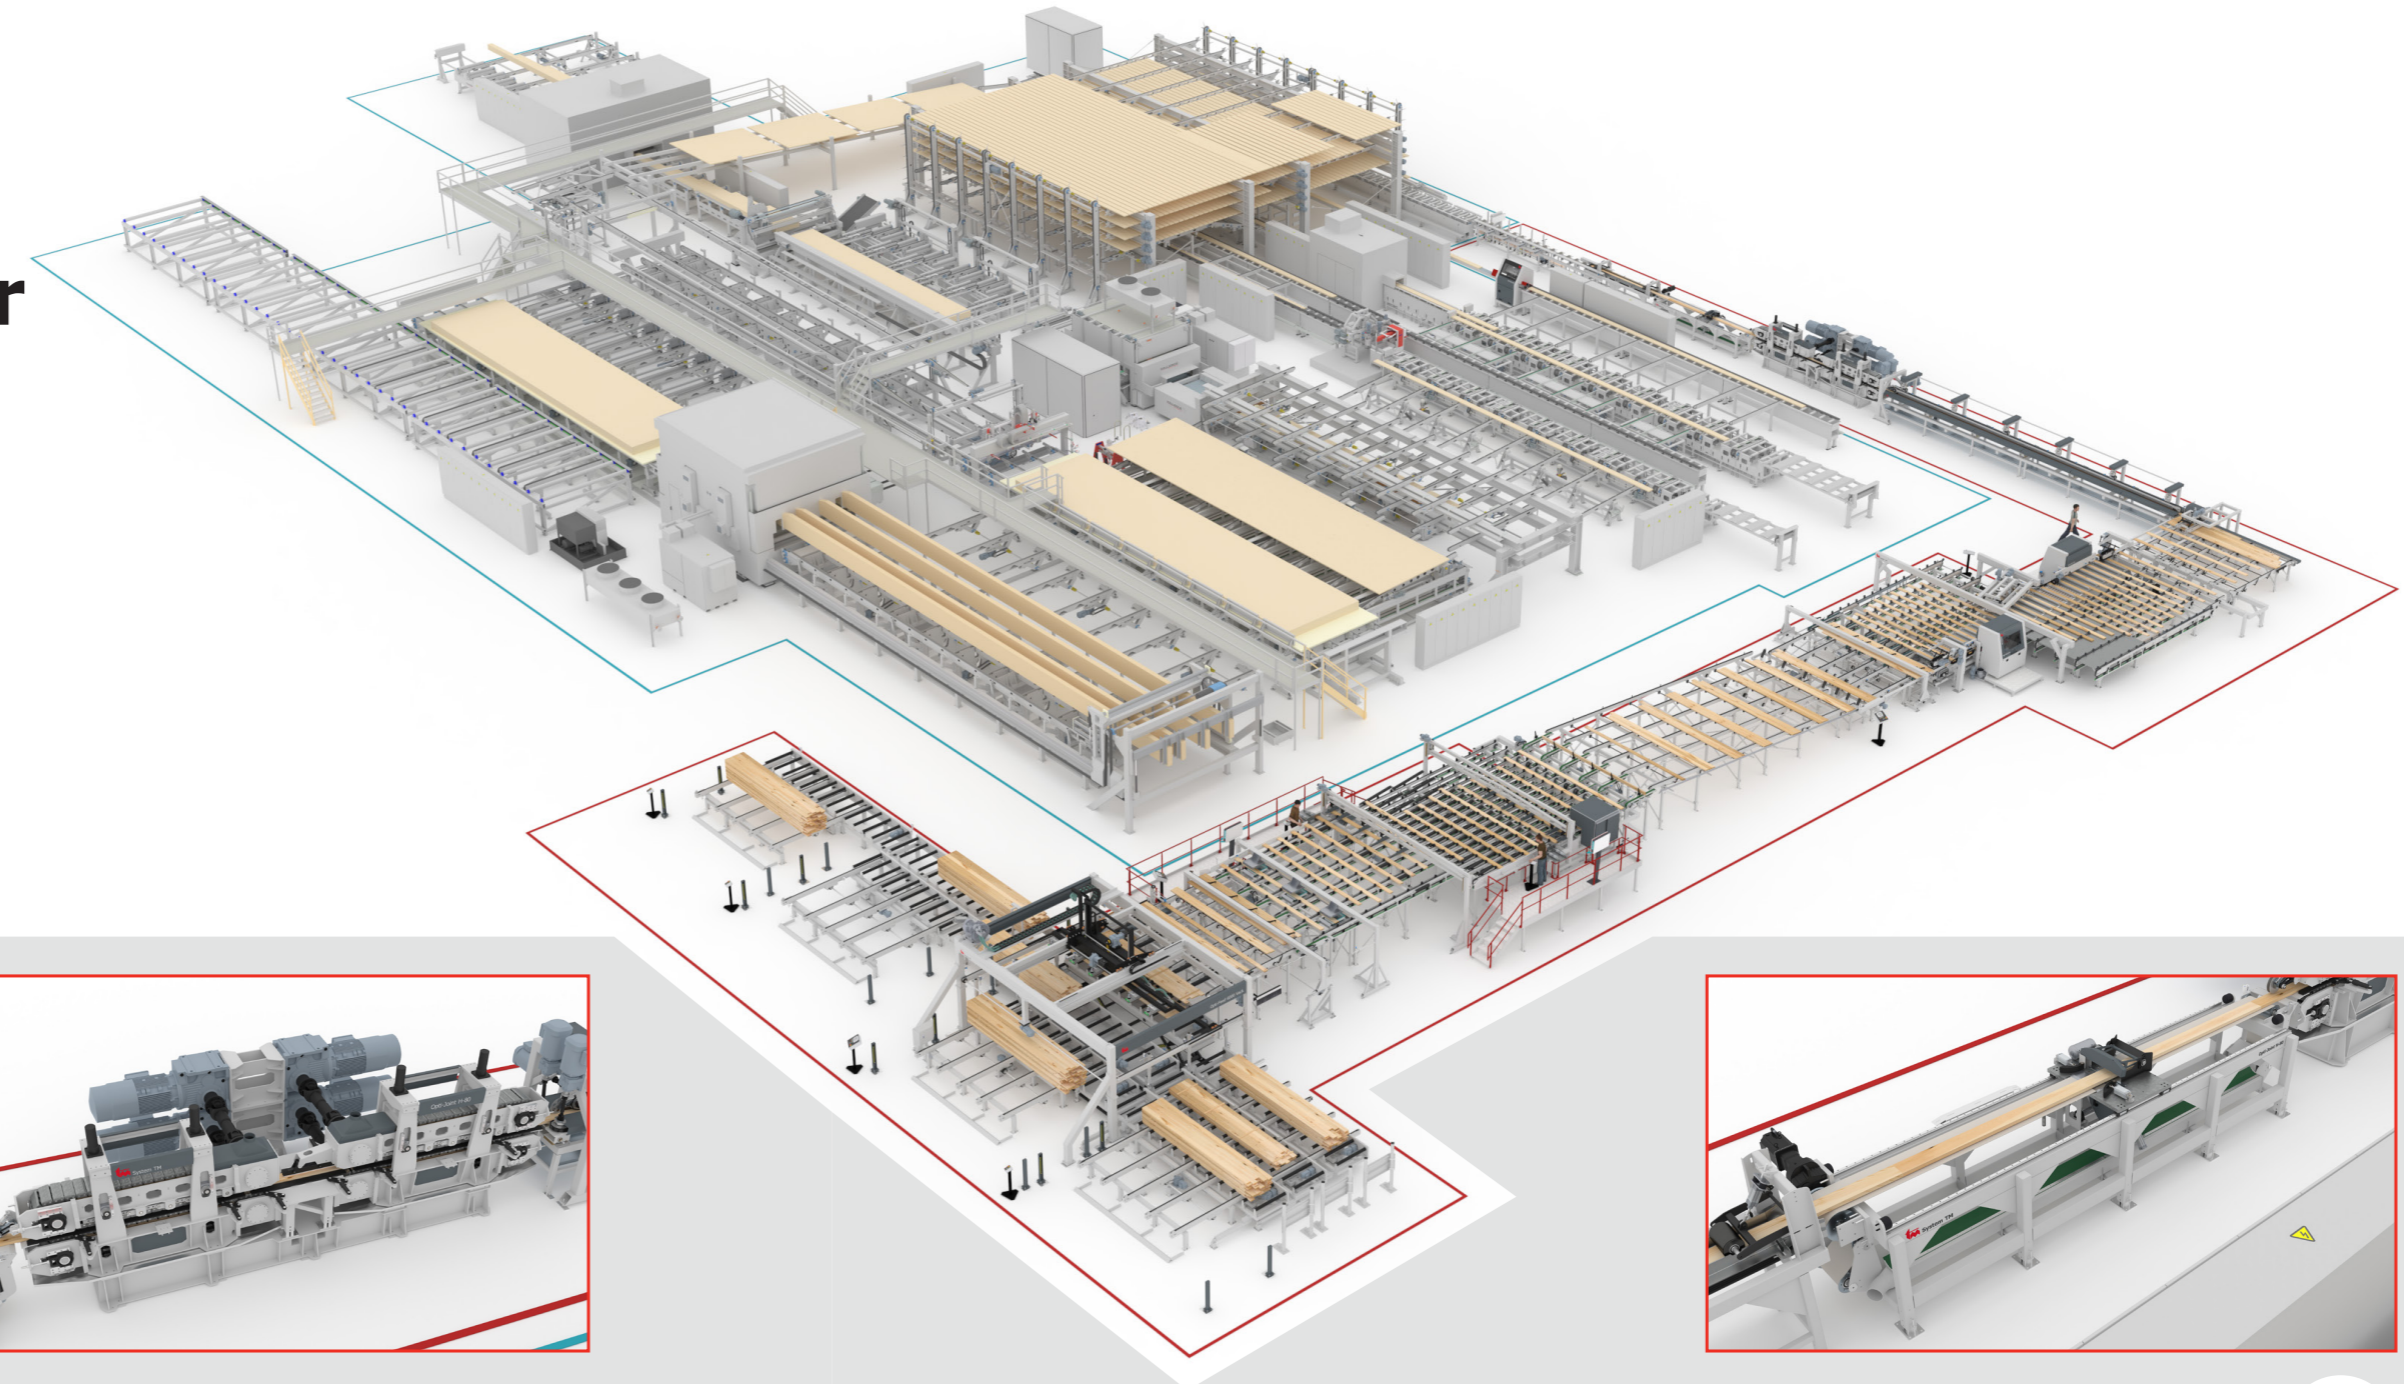

Come and experience what will evolve into the next generation of CLT presses.

Join us at System TM for a live demonstration of the Opti-Joint H-L finger-jointer in action! Our latest product development, the Opti-Joint H-L, is a state-of-the-art finger-jointing machine, designed to make long length lamellas for glue-laminated beams and CLT wall production.

We will showcase an Opti-Joint H-L line consisting of two shaper units, an alignment station, and a continuous press. After the continuous press, a flying saw unit will cut the lamellas into specified lengths.

Presenting the Opti-Joint H-L, a new finger-jointer for long length production

We will also take you on a tour around System TM to show you our production facilities and ongoing projects. Our Open House is a perfect opportunity for you to discover the latest news and developments within mass timber and timber processing.

We hope to see you there!
